

DYODE

Fully recessed LED emergency luminaire

DESCRIPTION

50mm in diameter it is one of the smallest recessed LED based emergency luminaires currently available.

AVAILABLE VERSIONS

Two versions are available one specifically designed for corridor lighting where the lens produces an elongated distribution to illuminate a centre line as an escape route, this extending the spacing normally required.

The second offers a more traditional cone distribution for use in open space areas or for specific task lighting.

The battery can be mounted through a 40mm cut out.

Self test option if required.
