4D's LIGHTING RANGE

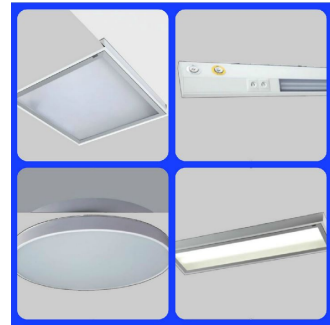

4D Lighting has a new product range available

We have been working very hard over the past few months to create a product range, for our website that covers all bases, and we think we've finally done it! We have trolled through a range of various sources to find a variety of products that not only covers the basic necessities for most projects but also included the fittings that often lead to a bit of head scratching as to who offers them. Another side of product specification that we, as lighting designers, are very aware of is how important photometric data is. So when possible we have uploaded these and when available each range has a ZIP file of LDT files. If there are any that aren't available from the website however please get in touch with us as they may have been made available since our last update.

Make sure you also check out our Clean room range which have all been manufactured under the ISO 13485 regulations.

The range will be updated on a regular basis to keep up to date with what is new in the industry so keep an eye out!
